RESEARCH
INTERESTS

My research interests lie in the areas of static and dynamic program analyses for the purposes of program optimization. I envision building compiler techniques to understand programs at a semantically higher level than is possible now, thus enabling optimizations and transformations on a much larger scale.

EDUCATION

Carnegie Mellon University, Pittsburgh, PA   Aug, 2016 - Present
PhD Candidate in the Computer Science Department

Indian Institute of Technology, Bombay, India   Jul, 2012 - May, 2016
Bachelors of Technology in Computer Science and Engineering
Honours in Computer Science
Minor in Electrical Engineering
GPA: 9.53/10.0

RESEARCH
PROJECTS

Scalable Pointer Analysis of Data Structures Using Semantic Models   Jun - Aug, 2019
Research Intern, Oracle, Inc
Adapted and implemented previous work on modelling data structure implementations for static analysis for the case of pointer analysis in a production compiler.
We adapt and simplify previous work on semantically modelling data structures implementations for Andersen's pointer analysis to obtain more precise results, with minimal rise in analysis costs.
Implementing this in the Graal Native Image compiler for Java, useful rise in precision (1.35X rise in the number of checkcast statements) was demonstrated with a 19% rise in analysis cost on an average.

Data Structure Aware Heap Partitioning on NUMA Architectures May, 2018 - Aug, 2019
Graduate Research Assistant, Carnegie Mellon University
Advisors: Prof. Todd Mowry, Prof. Phillip Gibbons
Building static and dynamic analyses to understand a program's data and computation to enable data and computation partitioning with applications to NUMA architectures.
We build an understanding of a program's use of irregular and/or linked data structures like trees, graphs, hashtables, etc. that are prevalent in modern code.
Leveraging this understanding, we are working to come up with intelligent partitioning of these data structures, other associated data and the computation for better locality on NUMA, or even distributed architectures.

Daedalus: Data Structure Aware Distinctness Analysis   Aug, 2016 - Aug, 2017
Graduate Research Assistant, Carnegie Mellon University
Advisors: Prof. Todd Mowry, Prof. Phillip Gibbons
Assisted Chris Fallin with his work on an innovative data structure aware static analysis with applications to parallelization and other optimizations.
Contributed to the design of distinctness analysis, a compiler analysis to more precisely infer memory dependences across loop iterations.
Assembled a benchmark suite of irregular, CPU intensive java programs for evaluating Daedalus.
Generally helped with infrastructure development.

Static Resource Bounds Inference for Functional Programs May - Jul, 2015
Research Intern, École Polytechnique Fédérale De Lausanne
Advisor: Prof. Viktor Kuncak
Extended previous work on inferring time bounds of functional Scala programs to add increased capabilities for inference of non linear bounds. Worked also on inferring bounds on stack usages.
Worked on Leon, an automated system for verification and synthesis of functional Scala programs built at EPFL.
Added support for inferring non linear time bounds of recursive functions by a using composition of bounds on number of recursive calls and time per recursion for recursive functions.
Developed an empirical model of stack usage of Scala programs through a survey of the generated bytecode for Scala programs. Evaluated the results of stack bounds inference by measuring the stack usage by actually executing the programs under consideration.

Concurrent Program Verification May - Jul, 2014
Research Intern, Institute of Science and Technology, Austria
Advisor: Prof. Thomas Henzinger
Developed a system using ordering predicates on executions of statements of concurrent programs with the aim of verifying them.
Developed an extension to an existing framework based on the CEGAR (CounterExample-Guided Abstraction Refinement) approach to include ordering predicates.
Created a set of sound and complete inference rules for these predicates.
Implemented a proof of concept in OCaml and proved the correctness of Peterson's algorithm.

OTHER PROJECTS **Improvements in Container based Virtualisation** Aug, 2015 - Apr, 2016
Undergraduate Thesis Project, Indian Institute of Technology, Bombay
Advisors: Prof. Umesh Bellur, Prof. Purushottam Kulkarni
Surveyed and experimented with ways to impose limits on usage of resources like CPU and IO, specifically in Docker containers.

Load Generator Scalability Improvement Jan - April, 2015
Research and Development Project, Indian Institute of Technology, Bombay
Advisor: Prof. Varsha Apte
Studied the operation and implementation of a load generator and suggested optimisations to improve its scalability and capacity.
Profiled and instrumented the load generator code to identify possible code to optimize.
Optimized the execution of individual worker threads to improve the single core load generation capacities by about 6X.
Improved multicore scalability by reducing synchronization between the worker threads.

SERVICE **Master of Science in Computer Science Admissions Committee** Dec, 2018 - Feb, 2019
Carnegie Mellon University

TEACHING AND MENTORSHIP **15-300: Research and Innovation in Computer Science** Aug - Nov, 2018
Carnegie Mellon University, Teaching Assistant

15-745: Optimizing Compilers for Modern Architectures Jan - May, 2018
Carnegie Mellon University, Teaching Assistant

CS 213 (minor): Data Structures and Algorithms Jan - Apr, 2016
Indian Institute of Technology, Bombay, Teaching Assistant

CS 296: Software Systems Laboratory Aug - Nov, 2015
Indian Institute of Technology, Bombay, Teaching Assistant

Signals and Systems MOOC on edX run by IIT Bombay   Dec - Jun, 2015
Indian Institute of Technology, Bombay, Teaching Assistant

Department Academic Mentor   Aug, 2014 - Apr, 2015
Mentored 5 sophomores in academic and general matters at Indian Institute of Technology, Bombay.

SKILLS

Proficient in Java, Datalog. Familiar with C++, Python, Scala, LLVM.

ACADEMIC
HONOURS AND
ACHIEVEMENTS

Secured **All India Rank 16** in **IIT JEE** and **All India Rank 38** in **AIEEE**.
Invited for the **ITCSC-INC Winter School** held at the Chinese University of Hong Kong, Hong Kong in January 2014.
Offered **KVPY**, **NTSE** and **INSPIRE** fellowships.
